FreeBSD OS source code**« **Reply #41 on: Yesterday** at 08:25:17 pm »

Smooth move, ban one of the communities top contributors because he didn't play nice with you.

All you did was make a public statement that you won't answer the hard questions... If dok wants to remain a member of the forum he will. It will take him about 90 seconds to make a new account and bypass your ban....

Really clever move.

Regardless of how many times you claim that the question has been answered, the many threads you've been suppressing lately should be proof enough that your community isn't buying it.

Also, the other stuff you linked to about how dok called the pfSense team out over the 2.4.x release... Well the 2.4.x release has been a shit show. You should be embarrassed.

I'm sure my ban is imminent now for having spoken my mind in such an inconvenient manner.

Did I not point out the reason why was he banned? It's not really my problem Dok made serious efforts to get himself banned. Dok is out for good, if he creates another account it will be removed immediately.

Dok abused the contributor card for far too long. We had years long patience with him, but his attitude in the past few days was unacceptable.

I don't know if you've seen your own karma rating or read over your own posts, but you aren't fooling anyone into believing you're the "good guy mod" just trying to keep topics on track.

Also, really? You think you'll immediately remove his future accounts? Come on.... You moderate a forum for a firewall that supports whole network VPNs, proxy's, etc. Are you kidding me?

Don't worry though, I'm sure after this he's no longer interested.

Years of contributions and a few days of "bad attitude" means he's out for good? You just said that.... And you thought you were taking the high road.
